

ABSTRACT OF THE DISCLOSURE

Many kinds of dispensing devices for drinks or similar fluid foodstuffs, especially for coffee and/or milk are already
5 known. Said devices comprise supply means ~~devices~~ ~~(5, 6)~~ for supplying at least two different hot drinks, filling outlets ~~devices~~ ~~(20, 20')~~ for dispensing hot drinks into at least one cup ~~(1, 2)~~ and valve means ~~devices~~ ~~(30)~~ for stopping and releasing drink pipelines ~~(9)~~ between the supply devices and
10 the filling devices. According to the invention, in order to improve hygiene and product quality, the valve means ~~devices~~ ~~(30)~~ are embodied in such a manner that additional pipelines ~~(11, 12, 15)~~ for supplying and/or discharging ~~detergent~~ flushing agents for cleaning, hot water or steam for
15 preheating or other similar fluids, can be connected to the valve means ~~devices~~ instead of to the drinks pipelines in order to treat the valve means ~~devices~~ in the areas through which hot drinks flow. As a result, a rinsing process can be automatically controlled between two dispensing steps.
